User Controls (Components), Crystal Reports, Setup Project

Creating User Control :

RUPAREL
EDUCATION PVT. LTD.
U80300GJ2013PTC075575

- All the controls are reusable almost controls are categorized in two category.
- That is
 - Custom Control
 - User Control
- Custom controls are completely custom and also provide reusable functionality. It is created entirely in a code.
- It is a light weight control because there is not anything added from visual studio.
- It is a based on html controls.
- While the user controls is also known as custom control and also provide the reusable functionality.
- It is create and design in visual studio and it also contains code behind file.
- It is much easier to deal with visual studio.
- It is also known as heavy weight control. Because it use .ascx file.

Explain property, methods and event of user control.

RUPAREL

U80300GJ2013PTC075575

- Microsoft .net controls are all inherited from common base class called user control.
- This class has all the basic functionality for graphical control.
- That will be use on windows form.
- When you inherit from the user control class you will be automatically supplied with certain properties, events and methods.
- **Properties :**
 - There are about 30 properties that you will inherit from the user control base class.
 - This property includes all the common properties that you will see in normal controls.
 - Such as ... Back color, fore color, font etc...
 - You can overwrite these properties if you need.

- **Events:**

- A user control that you create inherits about 40 events. From the user control base class.
- These events are also some common events like, load event, resize, layout etc...
- Your control will also include some of the low level mouse and keyboard event.
- You may over write these inherited events if you need.

- **Method:**

- It is also define automatically by the user base class.
- And you also need to create a method that can be call whenever an action is occurring.

Using User Control in Windows :

RUPAREL
EDUCATION PVT. LTD.
U80300GJ2013PTC075575

- By default, a UserControl object can act as a control container only when you create the control.
- To make a UserControl host a constituent control after you put the UserControl on a Windows Form, you must change the default designer of the UserControl.
- To implement design-time services for a component follow the following stapes.
 - **Setp1** : Create a Windows Forms Control Library Project.
 - **Step2** : Add a new UserControl in this project.
 - **Step 3** : Drag a control to the User Control. Ex. I create a login from in user control.
 - **Step 4** : Add a new Windows Forms Application.
 - **Step 5** : Now you can see in the toolbox that you have a login control. Drag this control onto your from.
 - **Step 6** : Now run the Windows From Application.

Projects as component :

RUPAREL

U80300GJ2013PTC075575

- When you create an app, website, plug-in, etc. in Visual Studio, you start with a *project*.
- In a logical sense, a project contains all the source code files, icons, images, data files, etc. that are compiled into an executable, library, or website.
- A project also contains compiler settings and other configuration files that might be needed by various services or components that your program communicates with.
- A project is contained within a *solution*.
- A solution is not an answer.
- It's simply a container for one or more related projects, along with build information, Visual Studio window settings, and any miscellaneous files that aren't associated with a particular project.
- A solution is described by a text file extension *.sln* with its own unique format. It's not intended to be edited by hand.

Creating Crystal Reports :

RUPAREL
EDUCATION PVT. LTD.
U80300GJ2013PTC075575

- Crystal Report is popular windows base report writer and report generation program.
- That allow a programmer to create report from a variety of data source with minimum of writing code.
- Crystal report can access data from most widely used database, and an integrated data from multiple databases within one report using open database connectivity (ODBC).
- Crystal report used an active-x control for crystal report to establish a connection with other program.
- A programmer can set properties of the crystal report control during design time a time or at run time.
- The programmer can use automation tools all exports, imports, linking and embedded reports.
- Crystal report also allowed text, graphics and database field as an object.
- That programmer can place arrange and format according to their requirement.
- Crystal report can create a report on the fly from user define variable.
- You can convert into an HTML and publish it to the web automatically.

Types of Reports :

RUPAREL

- Following is some list of crystal report types :-
- Standard Report
 - Use this to open the Standard Report Creation Wizard.
 - This wizard guides you through the creation of a typical report through step by step.
 - This is called Help of wizard. It will help you to create report step by step process.
 - Most of the case it will help for beginners to create reports in crystal tool.
- Blank Report Creation:
 - Use this command to create a new report without the help of a wizard.
 - When you select this option, the Database Expert appears so that you can choose a data source.
 - With option you can create a sample report with out data source.
 - You can select database after you create a report.

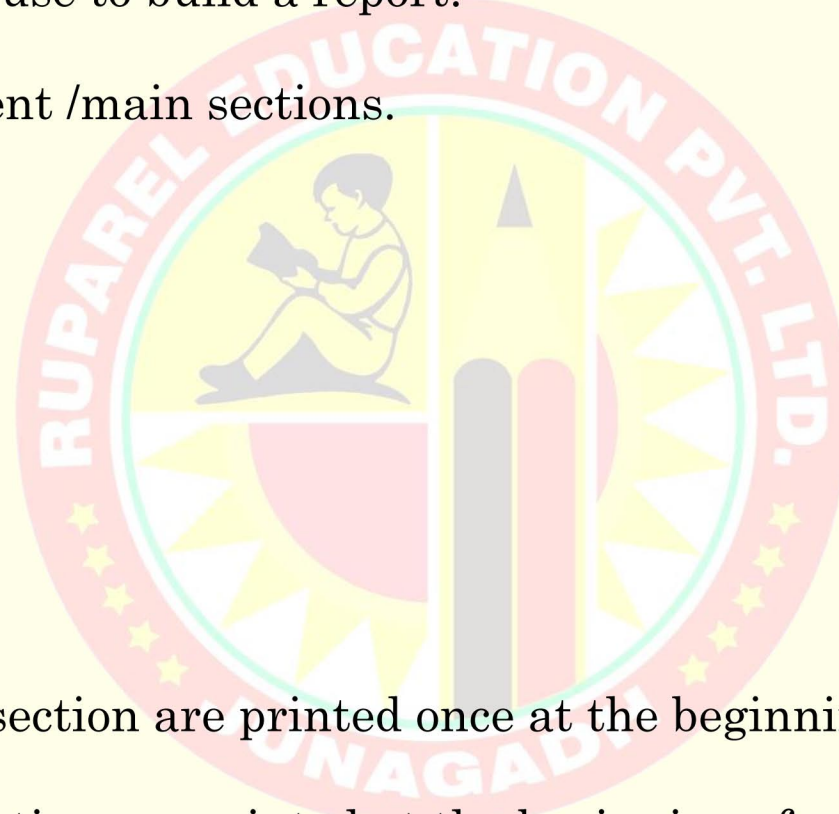

- Crosstab Report
 - Use this command to open the Cross-Tab Report Creation Wizard.
 - This wizard guides you through the creation of a report that contains a summarized grid.
 - So it will directly help to create cross tab in the report.
- OLAP Report Creation Wizard:
 - Use this command to open the OLAP Report Creation Wizard.
 - This wizard guides you through the creation of a report that contains a summarized grid based on an OLAP data source.
 - You can create the reports based on SQL server and Oracle OLAP data sources
- Mail later Report
 - Use this command to open the Mailing Labels Report Creation Wizard.
 - This wizard guides you through the creation of a report with multiple columns. The wizard is commonly used to create a sheet of address labels.

Report Sections :

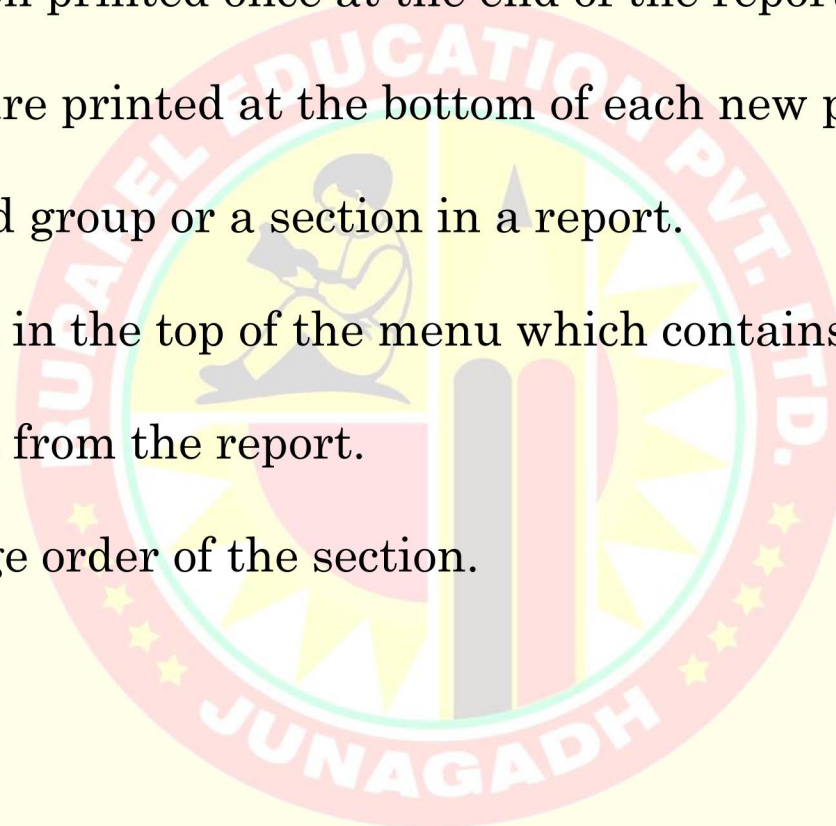

RUPAREL
EDUCATION PVT. LTD.
U80300GJ2013PTC075575

- Sections are design area, which is use to build a report.
- Crystal reports provide five different /main sections.
 - Report Header
 - Page Header
 - Detail
 - Report Footer
 - Page Footer
- Report header fields place in this section are printed once at the beginning of the report.
- Page header fields place in this section are printed at the beginning of each new page.
- Detail section fields are printed with each new reword.

- Report footer is place in this section printed once at the end of the report.
- Page footers place in this section are printed at the bottom of each new page.
- More section will appear if you add group or a section in a report.
- Just click on section expert button in the top of the menu which contains a list of all section in the report.
- As well as you can a delete section from the report.
- Use up down arrows they to change order of the section.

Formula, Special Field and Summary in Report

RUPAREL
EDUCATION PVT. LTD.
U80300GJ2013PTC075575

- C# crystal report section describe how to add a formula field in the crystal report
- If you have crystal report with Quantity and price field and you need an additional field in your report for total like.
 - **For e. x.:** $Tot = Quantity * Price$
- In this type of situation you can use the formula field in a crystal report.
- For each row that means each row in report are showing the total of Quantity and price.
- C# crystal report also support some special field like,
- Initial of customer name, order date, page number, etc... fields at the time of designing a report.
- It also describes how to add summary field in a report just right click on report footer and select insert menu for summary field.
- It will give you a combo box and select an appropriate field and location of that field in a report.
 - **For e. x.:** To display grant totals in a report footer section

Types of Setup Projects :

RUPAREL
EDUCATION PVT. LTD.
U80300GJ2013PTC075575

- C# support desktop application as well as web server project so it require to setup or deploy a project on server.
- If we want to deploy application in IIS server then we need to prepare a separate publish file and folder create a virtual path.
- Project is very useful in some situation like,
- Suppose if we do one application for client and we need to deploy that application in the client machine at that time entire folder are cover under a one setup file all .exe
- C# supports 3 different types of projects. That is.....
 - Setup Projects
 - Marge Module Project
 - Cab Project

- **Setup Project :-**

- Create a windows installer project to which file can be added.
- This project type is most generic out of three.

- **Merge Module Project :-**

- It create windows installer project to which files can be added.
- This project type is most commonly use for third party project.

- **Cab project:-**

- It creates cab project to which file can be added.
- It is also provide windows installer and web project configuration.

File system editor :

RUPAREL
EDUCATION PVT. LTD.
U80300GJ2013PTC075575

- It provides you to essential tool to work with the application folder user desktop and user's program menu.
- The first think we want to do here to include the relevant files and folder that we wish to install on the users machine.
- **User Interface editor:**
 - It contains a single section with hierarchical list of user interface dialogue box.
 - The list is divided into two sections, That is :
 - Standard and administrative installation and each section contain start, progresses and end nodes.
 - To represent the stage of installation.

- **Launch Conditions editor:**

- It specifies conditions require for installation on a target computer.
- It can be use to find a file, registry entry or a component.
- And the search result is return as a priority.
- That can evaluate in a condition.
- To access the launch conditions editor on the view menu pointer to editor and then click launch conditions.
- When a deployment project is selected from solution explorer.
